

Mrs McIntyre's 5th Class Maths Group

Hello all of you and welcome back.

I hope that you and your families are keeping safe and well. I also hope that you all managed to get out to play in the lovely spring sunshine and that you ate a nice Easter egg (or two).

I am setting you some work for the next two weeks. I know that it is difficult to work on new topics without help from your teachers but we only expect you to do your best and ask for help at home if you need it. When we eventually get back to school we will be able to go back over the topics and the work that you will have done during these weeks will mean that you'll all be off to a flying start!

Remember , you can only do your best.

I am attaching some videos that will also help you with these topics.

If you go to folenonline.ie, click register, select teacher, fill in a username, email & password and use Prim20 as the roll number you will be able to access online resources for Planet Maths and other books.

CJ Fallon have also allowed teachers & students free access to all of their ebooks. See the link below to access Busy at Maths 5. Busy at Maths 5 covers the same topics but is a bit easier to understand and is a lot more colourful .

Week 1 3D Shapes

1. Watch this video.

<https://www.youtube.com/watch?v=3-QwWFkz5hw>

2. Copy the table on p162 into your copy and try to fill it in. Find some examples of these shapes at home or in your environment.

3. Use bluetac or playdough and some matchsticks or cocktail sticks to build some of the shapes .

4. Try to complete as much of p164, 165 and 166 as you can

5. If you can access Busy at Maths, look at pgs 161-165

Week 2 Weight

I'm sure you've all had loads of practice in using weight in the past few weeks. Lots of baking and cooking going on and that's why we learn about weight, it's a real-life skill that we use every day. Ben probably knows a lot about weight already as it's so important in boxing.

1. Get out the weighing scales at home and have a go at estimating the weight of an object and then actually weighing it to see how close your estimate was. Use lots of common household objects and use the bathroom scales for heavier objects.
2. Bake something simple!
Find a simple recipe and weigh out your ingredients, then mix to make something delicious. You will need adult help with this activity.
Here is a simple recipe you could try.
<https://www.odlums.ie/recipes/queen-cakes-fairy-cakes-or-buns-2/>

3. Try to complete as much of pgs 152, 153 & 154 of Planet Maths as you can.
4. If you click on the link below do pgs 135 to 138 into your copies. It is not necessary to do every single sum, choose 3 or 4 to do from each task eg for pg 136 do a,b,c,d from number1, do c,d,e,f from number 2 etc
5. <https://my.cjfallon.ie/preview/student/16884/143>
